Election/Restrictions

This application contains claims 4 – 5, 8, 22 – 43, 47 – 82 and 86 – 87 drawn to an invention nonelected with traverse. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 – 3, 6 – 7, 9 – 21, 44 – 46, 83 – 85 and 88 – 97 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al. (US 6,261,679).

Chen et al. teach the invention substantially as claimed. Chen et al. provide an absorbent composition comprising an superabsorbent material and a cooling compound. The absorbent composition exhibits the claimed absorbent capacity (col. 37, lines 50 – 61) and exhibits a cooling effect. The absorbent material and cooling compound may be acidic and basic, respectively, ultimately providing the claimed pH ranges or similar ranges which may be modified based on the general conditions being disclosed in the prior art (see below). The absorbent capacity is also taught and/or may be modified

based on the general conditions being disclosed in the prior art (see below), as the endothermic effect. The method naturally flows from the structure as taught by Chen et al. and selling the invention of Chen et al. would be within the level of one of ordinary skill in the art since Chen et al. disclose that the structures of the invention are used for various purposes (col. 3, lines 1 – 17).

While a specific cooling effect may not be disclosed, it would have been obvious to one of ordinary skill modify the temperature reduction in order to determine the most effective product since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum value requires only a level of ordinary skill in the art.

Response to Arguments

Applicant's arguments filed December 22, 2005 have been fully considered but they are not persuasive.

With respect to the applicant's arguments that Chen does not disclose a cooling compound, the examiner disagrees. See col. 9, lines 18 – 32 and even col. 19, lines 8 – 18.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
